Desafío 2 - Grupo 4

Trabajando con CNNs o RNNs

Carlos Escovino | Diego Lesertesseur | Emiliano Llera do Campo

Introducción

En este segundo desafío, deberán elegir un problema en concreto a resolver y proponer un dataset acorde al ejercicio.

Para esto, podrán utilizar algún dataset preexistente o construir uno propio recolectando datos a partir de herramientas de web scraping o consumo de APIs.

Objetivos

- Entrenar y optimizar una red neuronal convolucional que sea capaz de resolver un problema de computer vision, por ejemplo, clasificación de imágenes.
- Entrenar y optimizar una red neuronal recurrente que sea capaz de realizar alguna predicción en base a información secuencial, por ejemplo, pronóstico de series de tiempo o clasificación de textos.

Planteo general de desafío

Dataset

Seleccionar un dataset de imágenes categorizadas.

Modelos

Determinar una lista de modelos de redes convolucionales.

Hacer pruebas con dichos modelos.

Comparativa

Determinar cuál de los modelos probados tiene mejor precisión al momento de clasificar una imagen.

Implementación

Dataset

Stanford Dogs Dataset:

Este conjunto de datos se ha creado utilizando imágenes y anotaciones de ImageNet para la tarea de categorización de imagen detallada.

- Categorías: 120
- Imágenes: 20,580
- Anotaciones: etiquetas de clase, cuadros delimitadores
- 757 MB

Modelos CNN

- Propio
- Pre-Entrenado VGG19/RAdam
- Pre-Entrenado InceptionV3/RAdam
- Pre-Entrenado InceptionV3
- Pre-Entrenado InceptionResNetV2
- Pre-Entrenado NASNet/RAdam
- Pre-Entrenado Xception
- Pre-Entrenado VGG19/RAdam/Fine Tunning
